# DYNAMIC INTERNATIONAL

# INCIDENT MANAGEMENT SOFTWARE APPLICATION

The **Dynamic Incident Management Software Application** simplifies the use of the Incident Command System (ICS), allowing teams to efficiently manage, access and share critical information without the need for cumbersome and time consuming paperwork.

In addition to the obvious advantages of using such a system, it also allows coordinated access to critical documentation from remote locations, automatic record keeping and time stamps for legal purposes and easy access to information to capture lessons learned from exercises and actual incidents. The system has been devised in such a way that it can be linked to status boards and remote servers to allow instant information sharing between locations.

As each company has their own unique requirements, the **Dynamic IM Software Application** can be adapted to suit the precise needs of each customer. A full web-based version is also available which can be used with any operating system.
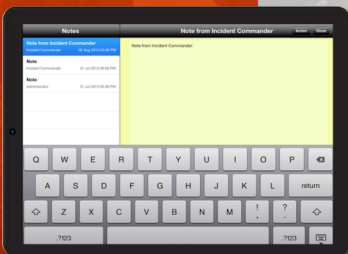

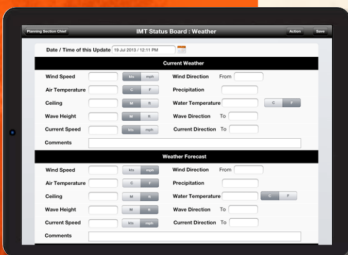

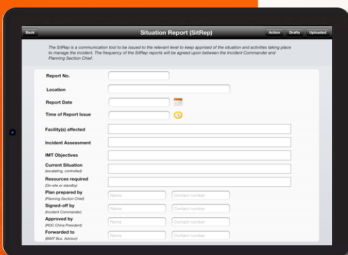

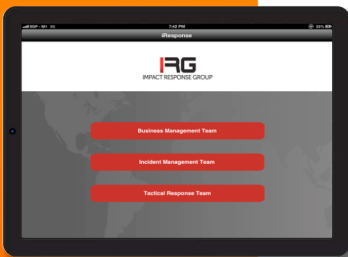

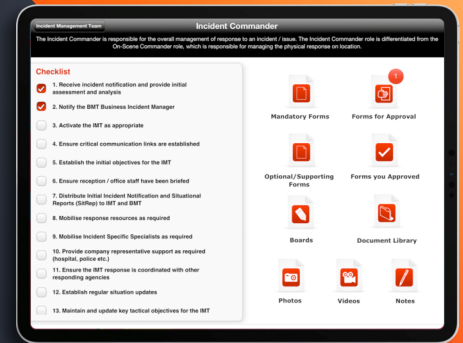

DYNAMIC IM SOFTWARE | FEATURES

Position Dashboard/Checklist

- Positions specific dashboard
- Fully customizable position checklist
- Position specific forms and status boards
- Access all plans and reference documents through the central library
- Capture, share and review incident photos and videos
